Office Action Summary	Examiner	Art Unit					
	Qamrun Nahar	2191					
The MAILING DATE of this communication app Period for Reply	ears on the cover sheet with the c	orrespondence address					
A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION. - Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication. - If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication. - Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).							
Status							
1) Responsive to communication(s) filed on 21 Fe	bruary 2006.						
	action is non-final.						
, <u> </u>	Since this application is in condition for allowance except for formal matters, prosecution as to the merits is

Art Unit: 2191

DETAILED ACTION

1. This action is in response to the RCE filed on 02/21/2006.

- 2. The rejection under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention to claims 32-33 and 35-36 is withdrawn in view of applicant's amendment.
- 3. The rejection under 35 U.S.C. 102(e) as being anticipated by Rangarajan et al ("Rangarajan", US 6,275,225) to claims 1-9, 11-29, 31-33 and 36-38 is moot in view of new ground(s) of rejection.
- 4. The rejection under 35 U.S.C. 103(a) as being unpatentable over Rangarajan et al ("Rangarajan", US 6,275,225) in view of Sanna, et al. "Using Windows NT Workstation 4.0", 1997 (hereinafter Sanna) to claim 35 is moot in view of new ground(s) of rejection.
- 5. Claims 1-9, 11-29, 31-33 and 35-38 are pending.

Response to Amendment

Claim Rejections - 35 USC § 103

- 6. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 7. Claims 1-9, 11-29, 31-33 and 36-38 are rejected under 35 U.S.C. 103(a) as being unpatentable over Rangarajan (U.S. 6,275,225) in view of Atkin (U.S. 5,907,326).

Per Claim 1 (Amended):

Rangarajan teaches a method of defining a user interface for a computer program, comprising: after execution of the computer program has begun (Start 201 of fig. 2; col. 5, line 8), defining a user interface of the program (col. 5, lines 56-58) by: reading a function description of a first function to be provided by the user interface (col. 7, lines 8-14, and 605 and 607 of fig. 6), the function description including logic for selecting an appearance of the user interface (col. 7, lines 45-61; e.g. Topology View, Pie/Bar), the function description comprising instructions for handling user interface events (col. 8, lines 22-33); executing the logic included in the function description to select an appearance description of a first appearance to be presented by the user interface (col. 7, lines 30-61; selecting on different boxes and radio buttons 511 in fig. 5 prompts the system to execute the logic to select different appearance descriptions to present to the user interface); associating the function description and the appearance description on the fly at run time into an executable form; and executing the executable form of the user interface to generate the user interface with the associated function description and appearance description (col. 5, lines 32-46; 215 of fig. 2; col. 7, line 62 to col. 8, line 12; and col. 9, lines 49-52; By the mere fact that the functionality and the appearance of the GUIs are both established at the same time does not imply that there are no separate function and appearance descriptions. The functionality and the appearance of the GUIs are both established at the same time when the configuration is saved. However, the modify procedure does allow separate modification of the functionality and the appearance of the GUIs, see col. 9, lines 41-47).

Page 3

Rangarajan does not explicitly teach that the function description includes logic for selecting an appearance of the user interface based on a geographic location of a user of the Application/Control Number: 09/467,310

Art Unit: 2191

computer program on the fly at run time. Atkin teaches that the function description includes

logic for selecting an appearance of the user interface based on a geographic location of a user of

the computer program on the fly at run time (see e.g. abstract; col. 3, line 64 to col. 4, line 4; and

col. 4, lines 19-26).

It would have been obvious to one having ordinary skill in the computer art at the time of

Page 4

the invention was made to modify the method disclosed by Rangarajan to include that the

function description includes logic for selecting an appearance of the user interface based on a

geographic location of a user of the computer program on the fly at run time using the teaching

of Atkin. The modification would be obvious because one of ordinary skill in the art would be

motivated to enable cultural profiles of an application to be dynamically changed while the

application is running (Atkin, col. 3, lines 59-61).

Per Claim 2:

Rangarajan teaches replacing the function description during program execution while

providing a continuity of presentation (col. 8, lines 57-65).

Per Claim 3:

Rangarajan teaches replacing the appearance description during program execution to

present logic of the user interface with a different appearance (col. 8, lines 57-65).

Per Claim 11 (Amended):

Art Unit: 2191

Rangarajan teaches a method of defining a user interface for a computer program, comprising: selecting at least one of a map component and a fashion component according to an environment variable on the fly at run time (col. 9, lines 22-34); associating the map component and the fashion component to generate the user interface (fig. 8; col. 9, lines 22-34 and col. 9, lines 49-52), the map component including logic for changing one of the map component and the fashion component (col. 9, line 59 to col. 10, line 13), the map component including instructions for handling and processing interface objects and events (col. 8, lines 22-33; and col. 9, lines 27-58); combining the map component and the fashion component into an executable form; and executing the user interface with the associated map component and fashion component (fig. 8; col. 7, line 62 to col. 8, line 12; col. 9, lines 22-34; and col. 9, lines 49-52).

Rangarajan does not explicitly teach that selecting at least one of a map component and a fashion component according to a geographic location of a user of the computer program on the fly at run time. Atkin teaches that selecting at least one of a map component and a fashion component according to a geographic location of a user of the computer program on the fly at run time (see e.g. abstract; col. 3, line 64 to col. 4, line 4; and col. 4, lines 19-26).

It would have been obvious to one having ordinary skill in the computer art at the time of the invention was made to modify the method disclosed by Rangarajan to include that selecting at least one of a map component and a fashion component according to a geographic location of a user of the computer program on the fly at run time using the teaching of Atkin. The modification would be obvious because one of ordinary skill in the art would be motivated to enable cultural profiles of an application to be dynamically changed while the application is running (Atkin, col. 3, lines 59-61).

Application/Control Number: 09/467,310

Art Unit: 2191

Per Claim 21 (Amended):

This is a computer-readable medium version of the claimed method discussed above,

Page 6

claim 1, wherein all claim limitations also have been addressed and/or covered in cited areas as

set forth above. Thus, accordingly, this claim is also obvious.

Per Claims 22-23:

These are computer-readable medium versions of the claimed method discussed above

(claims 2-3, respectively), wherein all claim limitations also have been addressed and/or covered

in cited areas as set forth above. Thus, accordingly, these claims are also obvious.

Per Claim 31 (Amended):

This is a computer-readable medium version of the claimed method discussed above,

claim 11, wherein all claim limitations also have been addressed and/or covered in cited areas as

set forth above. Thus, accordingly, this claim is also obvious.

Per Claim 32 (Amended):

This is a system version of the claimed method discussed above (claims 1 and 3), wherein

all claim limitations also have been addressed and/or covered in cited areas as set forth above.

Thus, accordingly, this claim is also obvious.

Per Claim 33:

Art Unit: 2191

Rangarajan teaches wherein the device is a display or a sound input-output device (Fig. 1,

Page 7

item 111, a display unit).

Per Claim 36:

Rangarajan teaches means for changing the map component while providing a continuity

of presentation during program execution using the fashion component (col. 9, lines 22-34).

Per Claim 37:

Atkin teaches customizing a selection base of function descriptions and appearance

descriptions based on a geographic location of a user (see e.g. abstract; col. 3, line 64 to col. 4,

line 4; and col. 4, lines 19-26).

Per Claim 38:

Rangarajan teaches wherein a selection of at least one of the function description and the

appearance description is made according to an environment variable (col. 9, lines 22-34).

Furthermore, as per claims 4-9, 12-20 and 24-29, Rangarajan teaches the limitations in

these claims, wherein all claim limitations have been addressed and/or covered in cited areas as

set forth in the Office Action, Mailed on 12/29/03, paragraph 4. See the rejection in the Office

Action, Mailed on 12/29/03, paragraph 4.

Application/Control Number: 09/467,310 Page 8

Art Unit: 2191

8. Claim 35 is rejected under 35 U.S.C. 103(a) as being unpatentable over Rangarajan (U.S.

6,275,225) in view of Atkin (U.S. 5,907,326), and further in view of Sanna, et al. "Using

Windows NT Workstation 4.0", 1997 (hereinafter Sanna).

Per Claim 35:

The rejection of claim 32 is incorporated, and further, the combination of Rangarajan and

Atkin does not explicitly teach that the device is a telephone. Sanna teaches that a telephone

connects to a PC system and utilizes the PC monitor to present a user interface associated with

the telephone ("Using Phone Dialer", pg. 442, par. 6 to par. 7).

It would have been obvious to one having ordinary skill in the computer art at the time of

the invention was made to modify the system disclosed by the combination of Rangarajan and

Atkin to include that the device is a telephone using the teaching of Sanna. The modification

would be obvious because one of ordinary skill in the art would be motivated to give a user an

extra option to present the user interface.

Response to Arguments

9. Applicant's arguments with respect to claims 1-9, 11-29, 31-33 and 35-38 have been

considered but are most in view of the new ground(s) of rejection.

Application/Control Number: 09/467,310

Art Unit: 2191

Conclusion

10. Any inquiry concerning this communication from the examiner should be directed to Qamrun Nahar whose telephone number is (571) 272-3730. The examiner can normally be reached on Mondays through Fridays from 9:30 AM to 6:00 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Wei Y Zhen, can be reached on (571) 272-3708. The fax phone number for the organization where this application or processing is assigned is (571) 273-8300.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the TC 2100 Group receptionist whose telephone number is 571-272-2100.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
